SUMMARY

Dynamic Cloud & DevOps Engineer and Cybersecurity Specialist with hands-on expertise in AWS architecture, CI/CD automation, VAPT, and secure full-stack development. Proven ability to identify 15+ OWASP vulnerabilities, design zero-trust cloud systems, and deliver ML-powered security solutions. Adept at translating complex security threats into actionable remediations across cloud-native environments using Docker, Kubernetes, Terraform, and Ansible.

SKILLS

Cloud & DevOps: AWS (EC2, IAM, Cognito, Amplify, DynamoDB, SES, S3) · Docker · Kubernetes · Terraform · Ansible · CI/CD · IaC

Cybersecurity: VAPT · OWASP Top 10 · Burp Suite · Nmap · XSS · SQL Injection · CSRF · Threat Modeling · Secure Code Review

Development: Python · JavaScript · PHP · C · React.js · Next.js · Node.js · REST APIs · HTML5 · CSS3

ML & Tools: TensorFlow · LSTM · NLP · Git · GitHub · Linux · Kali Linux · Postman

EXPERIENCE

Cybersecurity Intern · Cyber Sanskar

Jan 2026 – Present

- Executed end-to-end VAPT using Burp Suite & Nmap, uncovering 15+ critical OWASP Top 10 vulnerabilities with detailed remediation reports delivered to clients.
- Performed attack surface reconnaissance — subdomain enumeration, port scanning, service fingerprinting — to proactively identify exploitable entry points.
- Hardened web applications against XSS, SQL Injection, and CSRF via targeted secure coding practices, reducing the exploitable attack surface significantly.
- Configured AWS Cognito and IAM with least-privilege policies and MFA enforcement, securing cloud-hosted application authentication workflows.

KEY PROJECTS

CyberForce – Cloud Security Platform | AWS Amplify · Cognito · DynamoDB · Serverless

- Architected a production-grade serverless security platform with RBAC, MFA, and end-to-end encrypted workflows — achieving zero-trust compliance across all application layers.

SecuNexus – AI Threat Detection Engine | Python · LSTM · TensorFlow · NLP

- Built a real-time ML-based phishing detection system using LSTM neural networks, delivering sub-second threat classification with high-accuracy scoring across diverse malicious datasets.

AutoRecon – Penetration Testing Framework | Python · Nmap · Bash

- Automated multi-stage network reconnaissance and vulnerability correlation, enabling scalable penetration audits and cutting manual assessment time drastically.

EDUCATION

B.Tech — Computer Science & Engineering · MIT Aurangabad

2022 – 2026

CGPA: 8.21 / 10.0 | Relevant Coursework: Network Security, Cloud Computing, Database Management, Operating Systems, Software Engineering

CERTIFICATIONS

AWS Certified Cloud Practitioner · Google Cybersecurity Professional Certificate · Certified Ethical Hacking

AI/ML with Geodata · TCS ION Career Edge · TryHackMe (Active CTF Practitioner)
